SUMMARY

Software Engineer building full-stack products across web, mobile, TV and backend. Built Morrow, a streaming platform for Apple TV and web, and Curator, a Django and React Native news product with a live B2B app. Now shipping at Quantaura Design Tech.

SKILLS

Languages	TypeScript, JavaScript, Python, Go, Swift, SQL
Frameworks	React, Next.js, React Native (Expo), Node.js, Hono, Django, Django REST Framework, Frappe/ERPNext, SwiftUI (tvOS), PyTorch
Infra & tools	AWS, Cloudflare Workers, Docker, Kubernetes, PostgreSQL, Redis, Celery, GitHub Actions, Railway, Vercel, Linux, Git
Practices	REST and GraphQL API design, system design, automated testing (Vitest, Playwright, pytest), CI/CD

EXPERIENCE

Quantaura Design Tech — Full Stack Developer · Vadodara, India

Jul 2026 – Present

- Built **IDA GCC Desk** for IDA GCC, a UAE immersive-tech company: a Frappe app of 46 custom DocTypes on ERPNext and HRMS for pursuits, delivery, equipment, procurement and VAT invoicing, deployed to the client's VPS with a one-click Windows installer.
- Built **EventSorted**, a multi-tenant event and rental inventory product on React, TypeScript and a Hono API over Cloudflare Workers, D1 and R2: reservations, dispatch, partial returns, barcode scanning, CSV/XLSX import and dispatch PDFs; live for the first client with 211 passing tests.
- Wrote a Go agent for two-way TallyPrime accounting sync and benchmarked the platform at 10,000 items and 100,000 stock-movement lines.

PROJECTS

Morrow — Multi-source streaming platform for Apple TV, smart TVs and web

TypeScript, React, Vite, Shaka Player, Swift/tvOS, Node.js, Vercel · github.com/harshbhogayata/morrow

- Designed a two-stage source resolver that gates streams on device decoders, DRM and region, then ranks verified entitlements over unverified claims, so the player never advertises 4K it cannot deliver.
- Maps availability across Indian OTT providers and aggregator bundles, hands playback to the native app where entitled, and streams a home Jellyfin library otherwise, with per-title source switching.
- Built the Shaka Player playback stack with on-demand trailers, generated captions and resume state; one codebase runs on tvOS, VIDAA TVs and the browser, with 30 Vitest and Playwright suites.

Curator — Source-backed news product: Django API, web app, Expo mobile app and a live B2B briefs app

Django, DRF, PostgreSQL, Redis, Celery, React Native (Expo), React Router, Railway · teams.thecuratorgroup.org

- Built the editorial pipeline: 83 RSS and news-API sources ingested, clustered, rewritten by an LLM, image-scored and routed through admin review to publish, audio and push.
- Shipped a 131-endpoint REST API for Firebase auth, saves, collections, reading stats, billing and push, consumed by web and mobile through typed services.
- Launched Curator Teams, an isolated B2B workspace that synthesizes morning briefs for funds, with Slack and email delivery, Google OAuth and Stripe billing.

Other work

- **Flood Archive** — MCA major project, graded 9/10. Flood-risk map of Vadodara, 2019–2025: 50+ zones scored from satellite data, news and municipal bulletins, a dam-level risk simulator and an offline relief mode with shelters and SOS feed; Android app via Capacitor · github.com/harshbhogayata/vadodara-Flood-Archive-Relief
- **Parameter Golf** — OpenAI's 16 MB, 10-minute LM challenge: 16 experiment branches in PyTorch adding document-aware sliding-window evaluation, multi-hash bigram embeddings and a sweepable int5/int6 export path

EDUCATION

Parul University — Master of Computer Applications · CGPA 8.28/10

Jul 2024 – Jul 2026
